## Dynotab Octane Booster Technical Information

For the racing and high performance consumer, speed says it all, which explains the growth of aftermarket octane boosters. Over the last 15 years, this has been one of the fastest growing fuel additive segments in the industry. That growth dynamic is expected to continue as government continues to modify gasoline specifications in order to reduce pollution. As manufacturers continue to reduce the size and displacement of stock engines.

Chemplex® joins that segment with the introduction of its unique, new fast-dissolve **Maximum Strength Octane Booster** tablets designed for speed enthusiasts. If you want to get the maximum performance from your vehicle, **Dyno-tab® Maximum Strength Octane Booster** delivers astonishing results at an equally astonishing price.

Dyno-tab® **BEATS THE BOTTLED BOOSTERS**. That is a bold statement, but it is backed up by independent tests at a well known laboratory. Core Laboratories of Houston, Texas conducted the standard ASTM D-2699 Octane Test on referenced products in January 2005. They were confident that our booster tablets would perform well against other products on the market. They were surprised at how much better they performed. We ran a duplicate test sequence and the results were the same. **Dyno-tab® Maximum Strength Octane Booster** delivered an eye-popping 17-point jump in commonly available gasoline. *Based on independent testing with 91 octane research fuel. See results below*

When you need an octane boost you can count on, drop one tablet into the fuel tank. For maximum boost when performance really counts, add 2 tablets. One tablet delivers a 9.2% increase in octane. Two tablets can deliver up to 17 points.

Tract test demonstrates a 9.2% increased acceleration rate  
with Dyno-tab®.

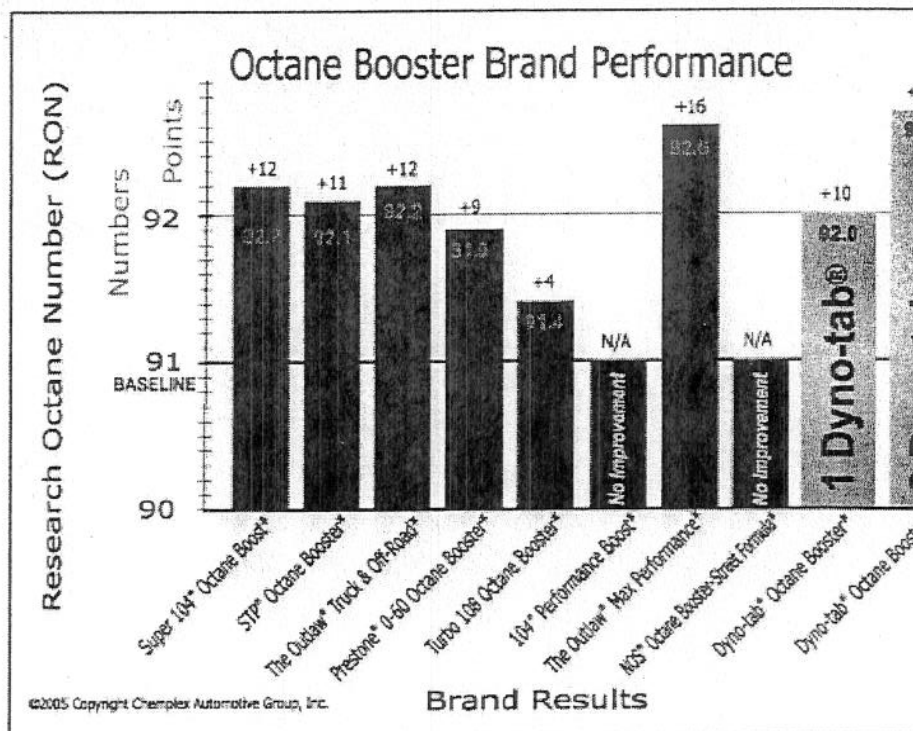

**TRACT TEST DEMONSTRATES AN EQUIVALENT 40 POINT INCREASE -- 17 POINTS** conducted to compare timed 0 to 70 intervals using three gasolines. Gasoline A was grade 87 Octane Regular. Gasoline B was pump grade 91 Octane Premium. Gasoline C was the same pump grade 87 Octane as candidate A, but additized to maximum strength with Dyno-tab® Octane Booster. Timed results show candidates B and C were 9.2% faster than A.

## 9.2% Increased Acceleration with Dyno-tab®

A - 87 Octane - untreated	From 0 to 70 17.57 sec
B - 91 Octane - untreated	15.95 sec
C - 87 Octane with Dyno-tab® Octane Booster	15.95 sec

Laboratory tests demonstrate a 17 point increase in octane.

ASTM D-2699 tests, conducted at Core Laboratories in Houston, Texas (2005), compared major aftermarket bottled octane boosters to Dyno-tab® using 91 octane gasoline (RON). The maximum street-legal dose of 2 Dyno-tab® tablets beat 8 w brands.

\*104® is a registered trademark of Gold Eagle Co. STP® is a registered trademark of Armor All/STP Products Co. The Outlaw® is a registered trademark of Pennzoil State Company. Prestone® is a registered trademark of Prestone Products Co. Turbo 108 is sold by No. American Oil Co. NOS® is a registered trademark of Nitro Systems/Distributed by Permatex, Inc. Dyno-tab® is a registered trademark of Chemplex Automotive Group, Inc.

### Notes

1 The term "Street Legal", as shown on the package, means that the dosage in or on the package, when used as directed, is within the treatment range approved under our EPA registration.
